ABOUT ME

Engineering professional with experience in power plant operations, supply chain coordination, and energy projects including feasibility studies, facility audits, and inspections. Focused on operational efficiency, maintenance planning, and cost-effective solutions.

EDUCATION AND TRAINING

15/09/2020 – 25/05/2024 Sukkur, Pakistan

Bachelor of Engineering Sukkur Iba

Final grade 80% | **Level in EQF** EQF level 7

WORK EXPERIENCE

PAA hyderabad , Pakistan

Electrical engineer

01/01/2026 – 25/05/2026

- Performed facility-wise load audits and wind resource assessments for commercial buildings, along with illumination system inspections for MD83 and Boeing 737 aircraft.
- Developed cost estimates and design comparisons for solar PV + BESS feasibility studies, including technology selection and commercial model analysis.
- Prepared maintenance oversight plans and complete project documentation for electrical rehabilitation works, building inspections, and HVAC vision planning.

Allied Engineering and Services karachi, Pakistan

Assistant Shift Engineer

01/05/2025 – 30/12/2025

- Oversaw shift operations and coordinated with maintenance teams for fault resolution—introduced a root-cause tracking log, reducing genset downtime by 60%.
- Monitored equipment performance and developed shift KPIs for response time and fault frequency—enabling data-driven decisions.
- Managed handovers, prepared daily reports, and created an Excel dashboard—cutting response times by 30% and breakdowns by 25%.

AH Associates

Supply chain procurement manager

01/06/2024 – 30/04/2025

- Handled procurement and inventory management using internal ERP systems and Excel trackers, placing purchase orders, monitoring stock levels, and sharing weekly cost reports with management.
- Worked closely with local vendors on a daily basis, negotiated pricing, followed up on delivery schedules, resolved supply issues, and tracked vendor performance to ensure project deadlines were met.

PROJECTS

01/08/2023 – 30/05/2024

Mobile robot

- Designed and fabricated a mobile inspection robot using Raspberry Pi and DC motor control, capable of navigating confined and hazardous environments for remote site monitoring.
- Integrated temperature and gas detection sensors for real-time environmental hazard assessment, supporting proactive safety measures during plant operations.
- Implemented voice command functionality for hands-free control, tested for reliable performance in high-noise conditions—enhancing operational safety and efficiency.

12/07/2023 – 23/08/2023

Conveyer Belt automation

- Diagnosed production line failures caused by manual motor shutdowns—engineered automated fault detection using Omron E3Z photoelectric sensors and relay logic.
- Deployed through-beam sensors for packet congestion detection and built control logic with 8-pin relays, timer relays, and 3-phase contactors—eliminating manual intervention.
- Reduced downtime and energy costs while improving throughput; scaled the same relay panel design to other conveyor lines.
